

## **Dangers of EMF Exposure**

In today's world, we are constantly exposed to Electromagnetic Radiation (EMF) also known as RF (Radio Frequencies) via cell phone usage, wi-fi, computers and electrical appliances. This type of radiation has resulted in decreasing the earth's natural protective magnetic radiation over 50% in the last 1,000 years.

Over the past several years, published research from various sources has concluded that exposure to EMF is detrimental to human health. Studies have shown EMF radiation breaks DNA strands, creates stress hormones, & causes cellular malfunctioning. Furthermore, in his recent address to colleagues, Anthony B. Miller, an expert cancer researcher and adviser to WHO (World Health Organization) issued his scientific opinion that RF radiation is a Group 1 carcinogen agent.

Some of the more common symptoms of EMF overexposure include: Headaches, Chronic Colds & Flus, Digestive Disorders, Sleep Disturbances, Depression/Anxiety, Fatigue, Memory Loss/Brain-fog and Dizziness. Children are particularly susceptible due to their small size and rapidly growing brains.

EMF protection devices are made of materials such as minerals and rare earth elements which mimic the earth's natural magnetic protective radiation. The devices may also contain frequency blockers in the form of scalar energy which weakens the radiation waves.

Products that protect you from harmful EMF exposure – Available for purchase

Cell Phone Shield

Cell Phone Stickers

Large Device Shield

Body Shield

Body Pendant

Home Harmonizer plug
